Installation

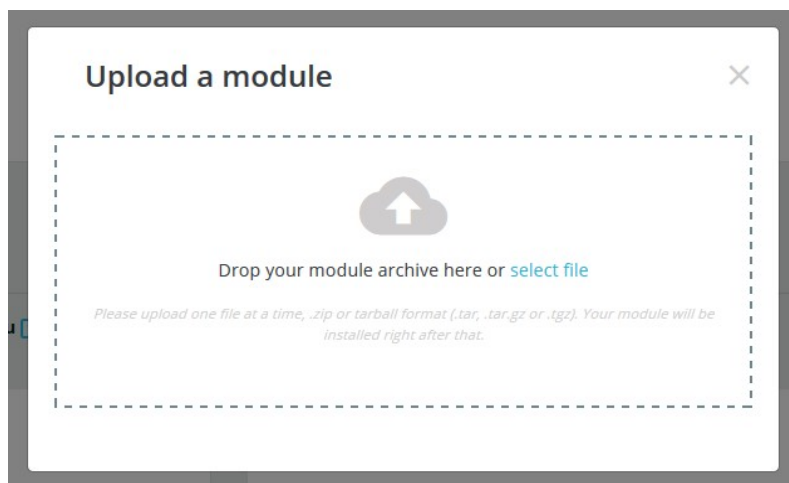

In the backoffice of your shop, go to menu **Improve > Modules > Modules Manager**.

Click the "**Upload a module**" button

Drop your module's file in the appearing windows or click "**Select file**".

If the module is not automatically installed, click on "**Install**".

2N Technologies Statistics

v4.13.0 - by 2N Technologies

Displays statistics for your store

Install

The module is now ready to be use. You can find it in Improve > Modules > Modules Manager > Modules. The module is called **NtStats (2N Technologies Statistics)**.

2N Technologies Statistics

v4.13.0 - by 2N Technologies

Displays statistics for your store

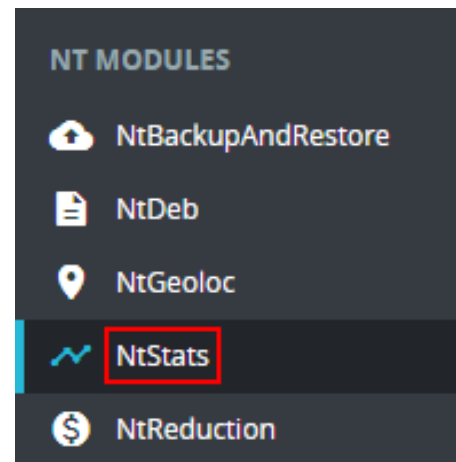

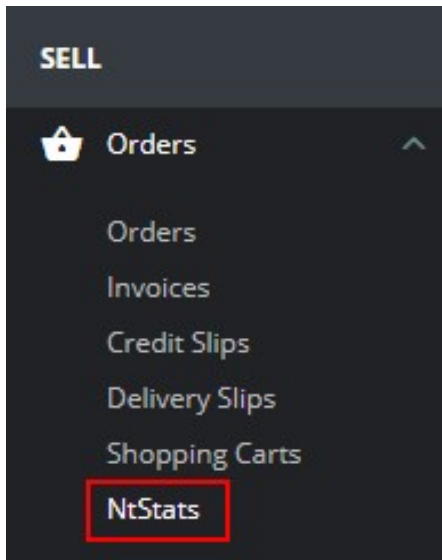

Configure

Use

To reach NtStats module, go to menu **Sell > Orders > NtStats** or **NT Modules > NtStats**.

The module menu allows you to:

- ✓ See several statistics
- ✓ Configure the module
- ✓ Configure the automation
- ✓ Consult the FAQ
- ✓ Download documentation
- ✓ Contact 2N Technologies
- ✓ See our other modules
- ✓ Help us translate the module into your language

1. General information

In each statistic, you will find a filter or refresh button, that will allow you to display/refresh the statistics listed, with the filters chosen if there are some. You will also see buttons to export your data in CSV file or Excel file (if your PHP version is at least 7.1). This kind of files can be opened in spreadsheet software like Microsoft Office Excel, LibreOffice Spreadsheet, ...

CSV files format used here is UTF8 with semicolon (;) as separator.

In the header of the list, a logo allows you to display a graph of the chosen column by clicking on it. Once in a graph, you can go back to the list by clicking on the logo of a list at the top left of the graph.

The columns positions can be changed as you wish, it will be saved automatically. If you choose to filter by a specific column, it will also be kept that way.

Type of graphs:

Logo that display line graphs:

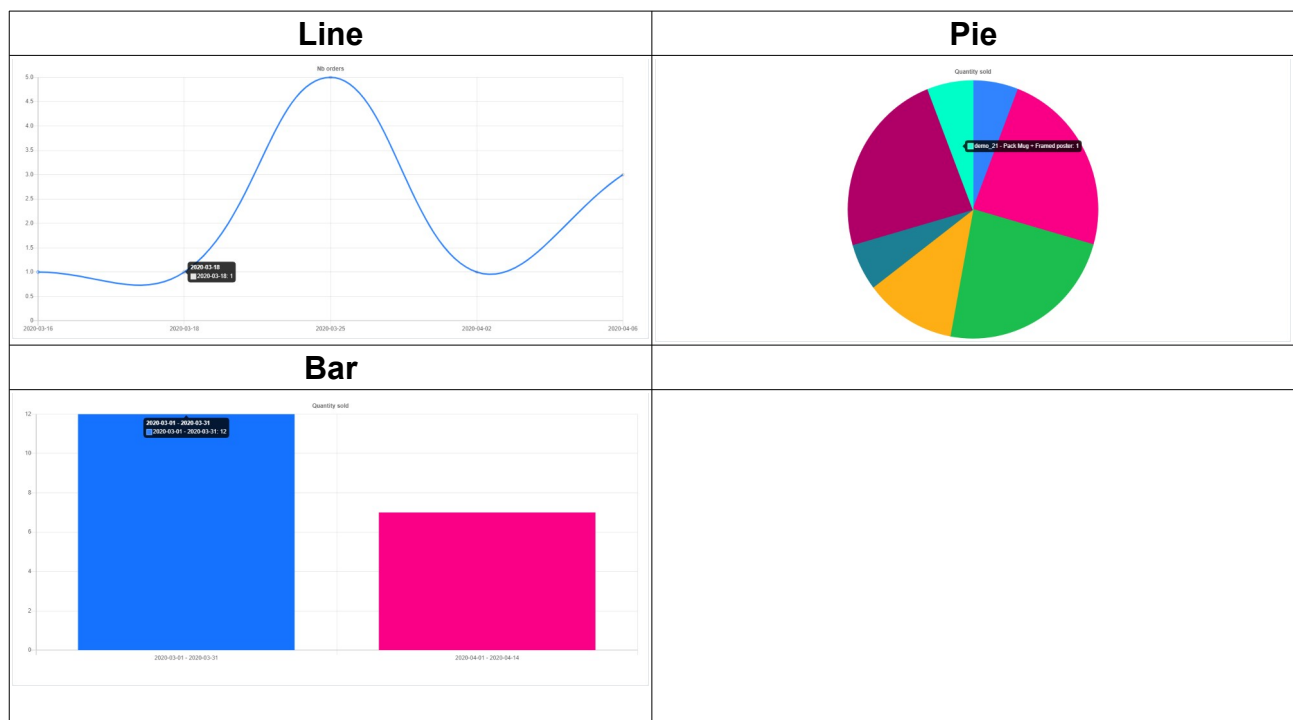

Nb orders 

Logo that display pie graphs:

Nb customers (%) 

Logo that display bar graphs:

Average cart

- **Orders dates to use** is the type of orders dates that will be used in the statistics.
Invoice date for the date of the order invoice, status date for the date of a chosen order status and creation date for the date the order was created on
- **Orders locations to use** is the type of orders locations that will be used in the statistics.
Invoice location for the location the order was invoiced to and delivery location for the location the order was delivered to
- **Consider the associated return as validated** is the list of return status that should be considered as valid returns
- **Product with combinations without enough stock: Number min of combinations without stock** is the default value to use in the tab "Product with combinations without enough stock"
- **Customers single order amount: Amount for one order** is the default value to use in the tab "Customers single order amount"
- **Customers orders amount: Minimum amount** is the default value to use in the tab "Customers orders amount"
- **Group product reference if it changed** if enabled and the reference of a product changed it will be displayed as the same product, showing the latest reference, instead of showing the product as different product with there respective reference

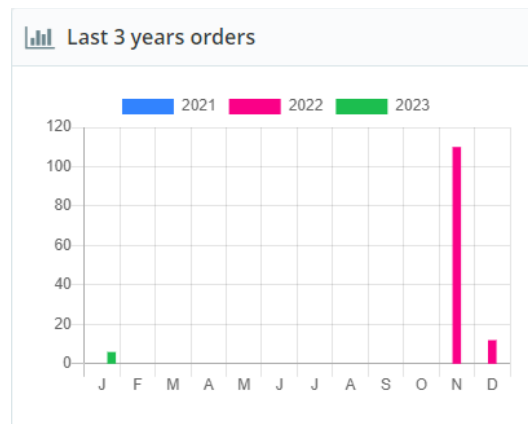

- **Autoload the stats** if disabled the stats will not load automatically. The filter button will load them
- **Receive an email when there is a new version** allows to receive an email when a new version of the module is available
- **Emails you want to use to receive message when there is a new version (separated by ";" if more than one)** is the list of emails addresses that should receive an email when a new version of the module is available
- **Emails address to receive stock alert message (separated by ";" if more than one)** is the list of emails addresses that should receive an email with the stocks alerts
- **Stock alert default quantity threshold (if product low stock level is not defined)** is the quantity for which a stock alert is created
- **Alert sending format** is the format of the stock alert in the email
- **Status of the products affected by the alert** allows you to choose if you want stock alert for all product or only for active products or only for inactive products
- **Receive an email even if there is no stock alert** allows you to received an email even if no product is on stock alert
- **Display last 3 years sales block on dashboard** display a block that show last 3 years of sales in your dashboard

- **Display last 3 years orders block on dashboard** display a block that show last 3 years of orders in your dashboard

- **Text to display for each payment methods** allows you to choose another text to display for that payment method instead of the original one. This can be useful if you have one payment method in more than one language

- **Allowed countries per user profile** is the list of countries of which the user profiles can see the statistics of

- **Attempt to increase server timeout** is useful when default server timeout is too low to compute statistics

- **New timeout limit** allows you to indicate the value of the new timeout limit

- **Attempt to increase the memory limit** is useful when the default memory limit is too low to compute statistics

- **New memory limit** allows you to indicated the value of the new memory limit

33. Automation

The screenshot shows the 'Automation' settings page. At the top, there's a toggle switch for 'Automation by 2n-tech.com' set to 'No'. Below it, a yellow warning box states: 'The automation service by 2n-tech.com only automatically send you an email stock alert at the specified time. Your data is not sent to the 2n-tech.com server. It's always your server that create the alert and send it to you.' A tab labeled 'Advanced' is selected. Under 'Advanced automation - Cron.', there's a text box with instructions on creating a CRON and a list of methods: WGet, Path, URL, cURL, and PHP Script. The 'WGet' method is selected, and a sample command is shown: `wget-O --q -t 1 --max-redirect=10000 "http://... .php" >/dev/null 2>&1`. At the bottom, there's a section for 'Automation by 2n-tech.com IP authorization' with a dropdown menu set to 'Authorize IPv4 and IPv6'. A 'Save' button is in the bottom right corner.

The "**Automation**" allows you to receive a daily stock alert by email.

This is divided in two parts, one with basic options, the other with advanced options.

The basic options allow you to schedule the stock alert for a given hour every day. The 2N server will launch the creation of the stock alert automatically at the time given. **No data is sent to the 2N server**, it only launch the creation instead of you! Everything runs on your server.

If you rather take care of the automation by yourself, the advanced options give you access to methods to automate it.

This is commonly done by the CRON tool on your server. If you do not know how to program a cron on your server, please look at the documentation of your host.

For your convenience, we provide some examples of commonly used techniques (URL, Wget, cURL, PHP script).

The automation by 2N Technologies requires 2N Tech server IP to be authorized to start automation if maintenance mode is enabled. You can choose to authorize both IPv4 and IPv6 (default choice) or only one of them (if your configuration cause issue with one of them) or none if you do not want to authorize automation by 2N Technologies when in maintenance.

If you are using the simple automation and your domain has changed, a button will appears to update it on our server so automation will be started on your new domain.

34. FAQ

?

FAQ

Are the prices with or without taxes?

The prices are with taxes included

How to open exported CSV files?

Weird characters appear when opening CSV file?

What does the Need column mean?

The "FAQ" tab allows you to find answers to often asked questions

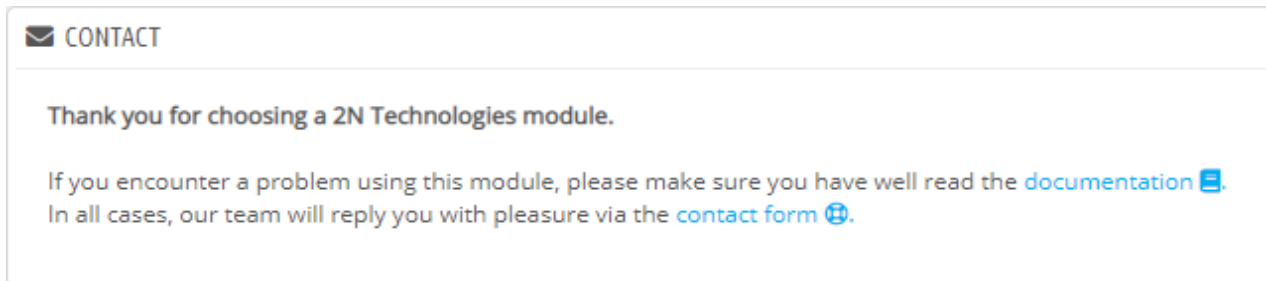

35. Documentation

The "**Documentation**" tab allows you to download the module's documentation in PDF.

36. Contact

The "**Contact**" tab gives you access to the contact form. If you have any problems with the module, please contact us.
